Thanks for filling in this form: [Project-Based Learning \(PBL\) Report](#)

Here's what was received.

[Edit response](#)

Project-Based Learning (PBL) Report

- Spend 5-10 minutes to fill this form.
Before filling this form, keep the following things ready:
- Your day-wise notes of all design thinking questions [Empathise, Define, Ideate, Prototype, Test]
 - Screenshots of your innovation
 - Screen recordings of your innovation's working model
 - Innovation images generated on Day 2 take-home task

This form is to record your thoughts and ideas about the innovations you made as part of IBM SkillsBuild's PBL activity so fill this form honestly and completely.

Your email address (karunakarnimmakayala38@gmail.com) was recorded when you submitted this form.

Your Full Name *

Nimmakayala Karunakar

Your Email ID (as per IBM SkillsBuild)

karunakarnimmakayala38@gmail.com

Your Mobile Number *

8688468382

College Name *

Aacharya Nagarjuna University

Qualification(Degree) *

B.tech

Day 1

Step 1: Understanding the Need

Which problem am I trying to solve?

*

When I opened the site, it loads a simple online optician store page called SpeckShop that sells eyeglasses ("spectacles") at a fixed affordable price (₹ 1,000 for all frames).

Step 2: What is the problem?

The problem I want to solve in **one clear sentence**

*

[You can try a prompt like this: "*I am ideating a solution for <enter your problem in detail> Convert this problem into a single clear sentence which I can share to an audience*"]

People need stylish prescription spectacles at an affordable price, but existing options are often expensive, inconvenient, or limited in choice.

Why is this problem important to solve?

*

[You can try a prompt like this: *"Draft 1-2 lines on why this problem is important to solve. Support this with evidence using relevant data points"*]

This problem is important to solve because clear vision is a basic necessity, yet many people delay or avoid buying spectacles due to high costs, limited access, and inconvenience, which directly affects their education, work productivity, eye health, and overall quality of life.

Take-home task

Ask 2–3 people (you can speak to your family members, friends, teachers, trainers) what they think about this problem. Write down surprising or new things you learn below.

*

I spoke to three people (a family member, a friend, and a teacher) about the problem of affordable and accessible

spectacles. The following were some new and surprising insights

Day 2

Design Thinking Process Step 3: Ideation

Step 3: Brainstorming solutions

List **at least 5 different solutions** (wild or realistic):

*

[You can try a prompt like this: "*I am ideating solutions for <enter your problem in detail> Suggest 5 unique solutions for this problem, which I can easily accomplish in 2 days using free, open-source mobile-friendly AI tools*"]

Here are different possible solutions to the problem of affordable and accessible spectacles — mixing realistic and creative ideas:

1. Check Network
 2. Solve the issue
 3. Update the website everytime
 4. Continue the visit from where the Client left.
 5. Take the feedback
-

Step 4: My favourite solution:

*

Creating a low-cost online spectacles store that offers stylish frames with quality lenses at a fixed, affordable price and delivers them directly to customers' homes.

Step 5: Why am I choosing this solution?

*

I am choosing this solution because it is simple, practical, and scalable, and it directly addresses the main problems of high cost, limited choice, and inconvenience while allowing people to easily buy affordable, stylish spectacles from anywhere.

Take-home task

Generate the image of your solution and how it will look
(eg: "a bag that charges your phone while you walk")

Attach the image in this box below:

*

[You can try a prompt like this: "*I am ideating a solution for <enter your problem in detail> I have selected a solution which includes <enter your solution description> Generate an image for this solution*"]

Tools you can use for Day 2

ChatGPT/Perplexity AI:

You can use these tools to compare your solutions and choose the most effective one

*AI Tools you can use
for the take-home task:*

Canva AI/CoPilot

AI/Meta AI: Use these mobile-based tools to generate images for the solution they want to design

Day 3

Design Thinking Process Step 4 & 5: Building & Testing my Prototype

Step 6: Prototype – Building my first version

What will my solution
look like?

[Take inspiration from the
image generated on Day 2 and describe the solution]

*

My solution will look like a simple, user-friendly online spectacles website where people can easily choose stylish frames, upload their eye prescription, and order affordable glasses at a fixed price with home delivery, free shipping, and basic warranty support.

What AI tools will I
need to build this?

*

[You can try a prompt like this: *"I am ideating a solution for <enter your problem in detail> I have designed a solution which includes <enter your solution description> What open-source, free AI tools that I can use to build this solution? The tools should be easily available and accessible on my mobile. Do not recommend tools which requires cost or subscription"*]

To build this AI-powered affordable spectacles website, I would need the following AI tools and technologies:

Top AI tools I

finally selected to build this solution? [Eg: Claude AI, Grok AI, Chatling AI]

*

Write it in 5 lines as 5 points

1.Chatgpt

2.Grok AI

3.Chatling AI

4.Google version AI

5.AR Try-aon AI

Step 7: Test – Getting Feedback

Who did I share my solution with? [You may share it with your trainer, peers or even AI] *

I shared my solution with my peers and with AI tools, and I received feedback and suggestions that helped me refine the idea and make it more practical and user-friendly.

What positive feedback did I receive?

*

I received positive feedback that the solution is practical, affordable, and easy to understand, addresses a real-life problem, and has good potential to help students and families while being scalable as an online business.

What feedback did I receive for improvement? *

I received feedback to keep the website simple and easy to use, ensure accurate prescription input, add a virtual try-on feature for better user confidence, and provide clear return and warranty policies to build trust with customers.

Take-home task

Record your solution and test feedback in voice notes.
Upload your voice notes, images and your solution/model on GitHub

*AI Tools you can use
for Step 6-7:*

ChatGPT/Perplexity

AI/Claude AI/Canva AI/Chatling AI/Figma AI: You can use these

tools to
build solutions/models or mock-up dummy prototypes

Day 4

Presenting & Reflecting on my Innovation

Step 8: Presenting my Innovation

Final Project Title:

*

AI-Powered Affordable Online Spectacles Platform"

Key points of
my presentation

*

[You can try a prompt like this with attachment/screenshot of your solution: *"I am ideating a solution for <enter your problem in detail> I have selected a solution which includes <enter your solution description> I tested the solution with <enter details of who tested your solution> and they gave the following feedback <enter feedback given by the testers> Generate a 1-minute pitch document with following headings: project title, problem statement, my innovation, feedback I received from users, impact of my innovation. Add the attached image in the pitch document"*]

Identified the problem of high cost and limited access to quality spectacles.

Explained why affordable vision care is important for students, families, and workers.

Proposed a low-cost online spectacles platform as the main

solution.

Highlighted the use of AI tools like chatbots, face analysis, and virtual try-on.

Shared feedback received and improvements made to the solution.

Concluded with the impact and future potential of the idea.

Step 9: Reflections

What did I enjoy the most during this project-based learning (PBL) activity?

*

I enjoyed the most thinking creatively about solving a real-life problem and designing an innovative solution using AI, especially imagining how an affordable online spectacles platform could help many people in their daily lives.

Step 9: Reflections

What was my biggest challenge during this project-based learning (PBL) activity?

*

My biggest challenge during this project-based learning activity was clearly identifying the problem and converting the idea into a simple, realistic solution, especially

understanding how AI tools could be practically used instead of just being theoretical.

Upload images of your day-wise notes/responses of all questions *

You can also combine your images into one PDF file and upload
